Features AutoCAD is a collection of various applications that are used to create, modify, and manage drawings, the most popular of which is the AutoCAD drafting application. An overview of the capabilities of AutoCAD and its associated applications can be found at the Autodesk website, where there are other links to more detailed information. Application functionality AutoCAD is used for many types of drawings including plan views, section views, three-dimensional (3D) views, 2D drawings that are projected on paper, 2D drawings that are projected on screens, or 2D drawings that are in solid geometry. Its applications include drafting, creating 3D models of buildings, visualizing the interiors of buildings, creating 2D and 3D maps, and some visualization applications. Some of the applications that work with AutoCAD drawings are the Alias program and the Animate tool. Alias creates raster images from drawings, while Animate allows users to animate the drawings created by AutoCAD. A program called the Ruler creates rulers for the user to measure in a drawing. The User Interface of AutoCAD can be customized to display a particular design, such as for an architectural project or a product. AutoCAD uses subdrawing technology to create and modify drawings. A subdrawing can be viewed, printed, or published. The drawing can be saved in its own file, or it can be incorporated into an existing drawing. A version of AutoCAD called AutoCAD LT is available as part of the entry-level purchase of Autodesk products, and as a stand-alone product for use on lower-priced computers. It does not include the software rendering tools and other advanced features that are available in AutoCAD and AutoCAD LT. AutoCAD can create a number of different types of drawings. They include: 2D drawings. A 2D drawing is a static drawing in which the drawing is created by projecting a model on a plane. Plan view drawings. A plan view drawing is a drawing in which the projection is along a fixed axis, such as along the X or Y axis of a Cartesian coordinate system. Plan views are typically used for designing roads and highways and for designing interior spaces. Section view drawings. A section view drawing is a drawing in which the projection is along a fixed axis
